

## ADDENDUM

### LAKE REREWHAKAAITU FIELD TRIP ARTICLE (Rotorua Botanical Society Newsletter 45: 10-22)

Presented below are a few alterations and updates to the species list for Lake Rerewhakaaitu.

- *Eleocharis sphacelata* should be listed under indigenous sedges (seen on the trip and included in the text, but omitted from the list!).
- *Juncus australis* (Druce 1975) should be listed under indigenous rushes.
- *Centipeda aotearoana* (P. de Lange pers. comm.) – this was listed under adventive species, but should be listed under indigenous herbs.
- *Glossostigma submersum* (Druce 1975) should be listed under indigenous herbs.
- The correct spelling is *Juncus edgariae* (not *J. edgarae*).

I would like to thank Colin Ogle for bringing this information to my attention.
